

mowing head **RKR**

*mowing head
with heavy blades*

Application

RKR mowing head is used for grass and weeds mowing when cleaning roadsides, embankments, irrigation ditches and overgrown forest paths.

Technical description

RKR mowing head consists of the housing, rotor with heavy blades designed for the mowing of grass and vegetation up to 5 cm in diameter, roller and adapter for mounting on mower crane.

The rotor is driven by axial piston hydraulic motor receiving oil from the mower's hydraulic power unit.

The control (rotor power-on and head swivelling) of the head is performed from vehicle cabin through electronic control panel with control stick.

The selection of high-quality materials (HARDOX400) in the design of mowing head housings ensures long-lasting operation under very difficult conditions.

Standard mowing head dimensions are provided in the table.

type	weight [kg]	mowing width [mm]	rotor type
RKR 1300	330	1300	rotor with heavy blades

Mounting

RKR mower head is designed for mounting on RASCO mower cranes.
