

mowing head **TORNADO S**

*mowing head with
mid-weight blades*

Application

TORNADO S mowing head is used for grass and weeds mowing when cleaning roadsides, embankments, irrigation ditches and overgrown forest paths.

Technical description

TORNADO S mowing head consists of the housing, rotor with mid-weight blades designed for the mowing of grass and vegetation up to 3 cm in diameter, roller and adapter for mounting on mower crane.

The rotor is driven by axial piston hydraulic motor receiving oil from the crane mower hydraulic power unit.

The control (rotor power-on and head swivelling) of the head is performed from vehicle cabin through electronic control panel with control stick.

The selection of high-quality materials (HARDOX400) in the design of mowing head housings ensures long-lasting operation under very difficult conditions.

Standard mowing head dimensions are provided in the table.

type	weight [kg]	mowing width [mm]	rotor type
TORNADO 1000 S	260	1000	rotor with mid-weight blades
TORNADO 1300 S	300	1300	rotor with mid-weight blades
TORNADO 1500 S	325	1500	rotor with mid-weight blades

Mounting

TORNADO S mowing head is designed for mounting on RASCO mower cranes.
